COVID-19 VACCINES

We have received several inquiries about the Covid-19 vaccines and potential distribution in Big Sur. The first Pfizer vaccines have already arrived in California. Distribution will initially target high-risk healthcare workers and first responders. We have been assured by Monterey County Health Department that we are on the list to receive vaccines, however, there is no indication regarding the timeline. We will know more after the FDA action regarding the Moderna vaccine. Check back here. We'll keep you updated as we know more. In the meantime, please continue to take this seriously and act responsibly: mask, social distance, cleanse hands frequently.......and, stay home unless you have essential needs!
